

NeoSchool ↔ KDVC Endpoint Reuse Report

MOU deliverable — Connect NeoSchool to the existing KDVC ecosystem (reuse-first)

Organization: Kardiverse Technologies LTD

Prepared for: Nice

Date: 16 September 2026

Scope cap: 8 hours / EUR 40

Rule: No new NeoSchool backend or endpoints without prior written approval from Nice.

Cover note

NeoSchool MOU — endpoint reuse complete within approved scope.

- Reviewed Taxi, NeoPay, VoiceSlogan, User/Sponsor Dashboards, NeoCard/shared API, and Proof & Audit.
- Mapped and minimally wired **Student ID**, **Attendance** (read), **Device/Event**, and **Proof** to existing NeoCard endpoints.
- Basic API validation: **PASS** (V-01...V-03).
- Skill Session ID**, **SkillLab**, and **Exams**: gaps — no matching KDVC endpoint; stopped per reuse-first rule.
- NeoPay / VoiceSlogan: **N/A** unless confirmed for this pilot.
- No duplicate NeoSchool backend was created.**

NeoSchool UI: frontend/school dashboard/dashboard-perfection (client-side KDVC adapter only).

1. Executive status

Item	Status
KDVC systems reviewed	Done
Requirement → endpoint mapping	Done
Minimal reuse wiring into NeoSchool UI	Done (client-side adapter; no new backend)
Basic validation	Done (API smoke 16 Sep 2026)
Duplicate NeoSchool backend created?	No

2. Endpoint reuse matrix (MOU §7)

NeoSchool requirement	Source KDVC system	Reused endpoint / service	Adaptation made	Test result / remaining gap
Student ID	NeoCard / Shared API	GET /v1/users	Map user_id → student id in UI	PASS — HTTP 200; 6 users (6 active)
Attendance	NeoCard / Shared API	Verify + POST /v1/neocard/checkin; dashboard reads GET /v1/neocard/transactions	Preserve occurred_at; created_at = receive/sync time	PASS — read route HTTP 200; write path = fingerprint terminal (Stage 5)
Device / Event data	NeoCard / Shared API	GET /v1/hardware/devices, transactions	Devices → Admin; events → Overview/Proof	PASS — HTTP 200; 2 active devices
Skill Session ID	—	—	—	GAP — stopped; needs written

				approval for any new API
SkillLab data	—	—	—	GAP — stopped
Proof & Audit	NeoCard + Taxi + Dashboards	/v1/neocard/transactions, /api/audit-logs, /api/user/audit	Map to Proof tab	Wired (fallback chain)
User Dashboard flows	Dashboards backend	/api/user/*	Optional bridge	Config ready; full embed not required for this mapping
Sponsor Dashboard flows	Dashboards backend	/api/sponsor/*	Env only	N/A unless pilot needs sponsor KPIs
NeoPay	NeoPay	/api/mpesa/*	—	N/A unless payments are in pilot
VoiceSlogan	VoiceSlogan / Taxi	VoiceSlogan APIs	—	N/A unless slogan/voice is in pilot
Exams & Results	—	—	—	GAP — no KDVC exams API

3. Minimal adaptation (what was built)

Client-side reuse only, under the NeoSchool school dashboard:

Component	Role
KDVC config	Env for NeoCard / Taxi / Dashboards (optional NeoPay / VoiceSlogan)
KDVC HTTP client	Calls existing bases with x-api-key / Bearer
Mappers	Map KDVC JSON → existing school dashboard view models
School data composer	Overview / Analytics / Proof / Admin from KDVC; SkillLab / Exams throw documented gaps
Data source switch	Prefer KDVC when VITE_USE_KDVC=true

Not done (on purpose): new NeoSchool API server, new SkillLab endpoints, SOC/NOC integration.

4. Basic validation evidence (16 Sep 2026)

NeoCard backend health: **OK** (GET /health → 200). No API keys included in this report.

ID	Connection	Result
V-01	GET /v1/users	PASS — 6 users / 6 active
V-02	GET /v1/hardware/devices	PASS — 2 devices (includes Stage 5 device)
V-02b	GET /v1/fingerprints	PASS — 2 enrollments
V-03a	Transactions with admin key	PASS — correctly rejected (401)

V-03b	Transactions with device key	PASS — HTTP 200 (route reusable)
V-04	SkillLab / Exams	PASS (gap) — documented; no KDVC endpoint

Live mapper counts: studentsActive = 6 · totalEnrolled = 6 · fingerprintVerified = 2 · admin.devices = 2

5. Gap register

Gap ID	Requirement	Disposition
G-01	Skill Session ID	Documented; stop; new API needs Nice written approval
G-02	SkillLab data	Documented; stop
G-03	Exams & Results	Documented; stop
G-04	Dedicated student_id schema	Reuse user_id mapping only

6. Event timestamp policy (confirmed)

Field	Meaning
occurred_at / client timestamp	Original event time — unchanged after synchronization
created_at	Server receive / sync time (stored separately)

7. KDVC systems reviewed (summary)

KDVC system (MOU)	Reuse outcome for this pilot
Taxi / Taxi backend	Available (audit/proof/scan); NeoCard preferred for school identity/attendance
NeoPay	Reviewed; N/A unless payments required
VoiceSlogan	Reviewed; N/A unless voice/slogan required
User Dashboard	Available (/api/user/*)
Sponsor Dashboard	Available (/api/sponsor/*)
Shared / Core API	NeoCard /v1/* + Taxi /api/* used as shared platform APIs
Proof & Audit	NeoCard transactions + Taxi audit + Dashboard audit routes

8. Acceptance checklist (MOU §8)

Criterion	Status
Existing KDVC systems reviewed within time cap	Yes
Relevant NeoSchool functions mapped to existing endpoints	Yes
Reuse integrations validated (basic)	Yes (API smoke PASS)
Gaps documented (not silently replaced by new APIs)	Yes
No duplicate NeoSchool backend	Yes

9. Closing

MOU core deliverable is complete: review → map → minimal reuse → basic tests → report, with gaps documented.

Any work on SkillLab, Skill Session ID, Exams, or **new** endpoints requires **separate prior written approval** from Nice and is outside the EUR 40 cap unless extended in writing.

Prepared under the NeoSchool ↔ KDVC reuse-first MOU — Kardiverse Technologies LTD.
